trace patient

recover in comfort

A slim profile and graceful contours give Trace an unmistakable style advantage over the typical metal chair. Trace is designed with a combination of high density molded foam for patient support, and low density foam selectively positioned to avoid pressure points while sitting.

trace waiting

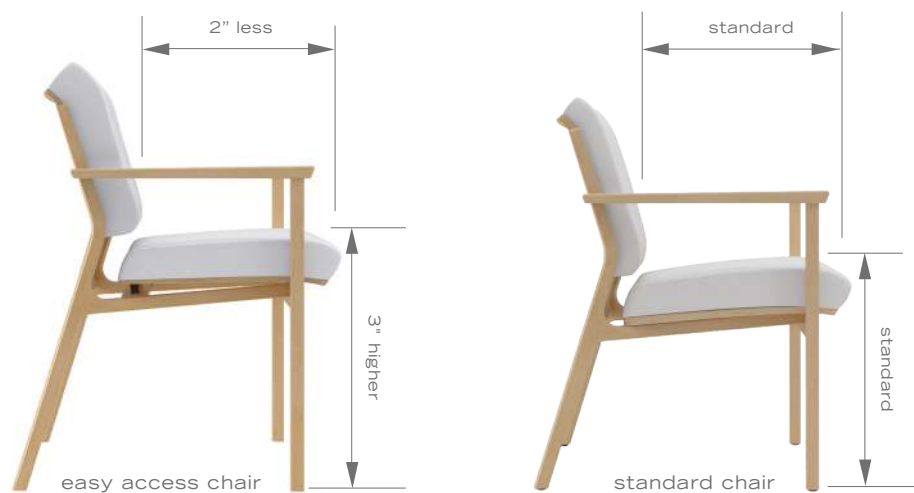

contemporary aesthetics meet practical functionality

The look of molded wood back option adds a level of sophistication not typically found in the patient room or waiting area. A generous clean-out is incorporated without disturbing the beauty of the molded wood seat and back contours. The elegant, elliptical frame profile is rarely found in a metal solution.

designed just right ...

The trace easy access chair design has been carefully refined to meet modern orthopedic post-op and rehab requirements. Through research with orthopedic professionals, we found they not only like to have easy access chairs in the waiting area, but they are also used in the rehabilitation process.

Shorter seat depth aids orthopedic surgery patients in comfort. 3" higher seat height and level pitch meet post surgery restrictions.

trace easy access chair

trace tables

form meets function

Trace occasional tables provide a practical and refined surface solution. The coffee table and end tables feature a reverse bevel edge profile to complement the Trace seating collection. The tops are offered in thermoform and solid surface to aid infection control efforts. Laminate and wood veneer tops are also available.
